

FL-01: AI Workflow Audit and Tool Setup

Workflow Audit

Task	Classification	Why
Writing key points in sessions + notes after	Just me	Handwritten notes help me understand better.
Completing assignment after session	Collaborate with AI	Helps build the structure of how the flow should look.
Writing LinkedIn posts	Delegate with review	AI drafts, I review and iterate until it sounds like me.
Studying for a paper	Collaborate with AI	AI helps me understand topics easily, especially theoretical ones.
Creating README files	Delegate with review	Speeds up process, gives a professional walkthrough.
Researching things (phone, travel etc.)	Delegate with review	AI lists things in an easy-to-understand way.
Building a model pipeline	Collaborate with AI	AI speeds up code writing, I decide the approach, dataset, review metrics, understand the pipeline flow.
Reviewing/adjusting my code	Collaborate with AI	Time-efficient, speeds up the process.
Drafting mail/message	Delegate with review	Makes it sound professional, saves time and starting friction.
College project/assignment	Delegate with review	I tell AI what I want and how, AI does it, I review before submitting.
Watching movies/series	Just me	I learn English through movies and captions instead of AI apps or classes.

Claude Project

Three Target Tasks with Success Definitions

1. Building a Model Pipeline

Classification: Collaborate with AI

Done well:

The pipeline has a documented baseline before any model, correct client-holdout split (no leakage), and I can explain in my own words why each feature/step is there, not just that metrics improved.

2. Creating README Files

Classification: Delegate with review

Done well:

A stranger understands the project in under 60 seconds; it shows the baseline vs. model result, states the train/test split logic, and has setup steps that actually run.

3. Drafting Mail/Messages

Classification: Delegate with review

Done well:

AI draft edited until it matches my actual voice/tone, is factually accurate (no invented details), and I'd send it without hesitation under my own name.

Reflection

This exercise helped me think more intentionally about where AI should support my work and where my own understanding is essential. I realized that while AI can save time on drafting, structuring, and reviewing, core learning tasks like building machine learning pipelines and taking notes are most valuable when I stay actively involved in the process.
